

GAIA

An intuitive platform to easily find and analyse scientific information available on herbs and natural products

Natural products are evolutionary encoded to provide remedies for many health issues with thousands of years of experience on risks and therapies

High quality safety and dosage/ preparation information however is many times hard to find or process

Back to nature

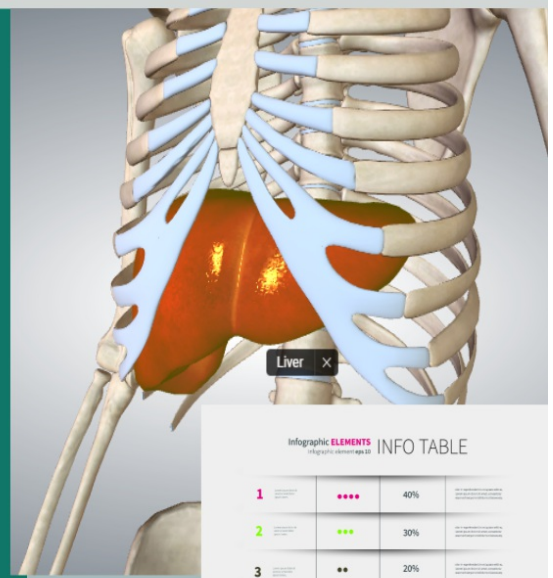

Envision Biotechnology focuses on knowledge extraction and analysis of scientific data on herbs and functional foods to facilitate their accurate and reliable quality control, safe usage and optimal dosage of raw herbs and their products

Our mission is to bridge the gap between scientifically proven and tested medicine (evidence-based drugs) and traditional herbal medicine

Decision help

Our platform helps pharmacists, therapists and consumers to find natural remedies and supplements by choosing the relevant part of the body on a 3D animated platform or text searching for different health issues/ natural products

Also displaying clear information on dosage/preparation/interaction/side effects linking to all products available

GAIA platform offers

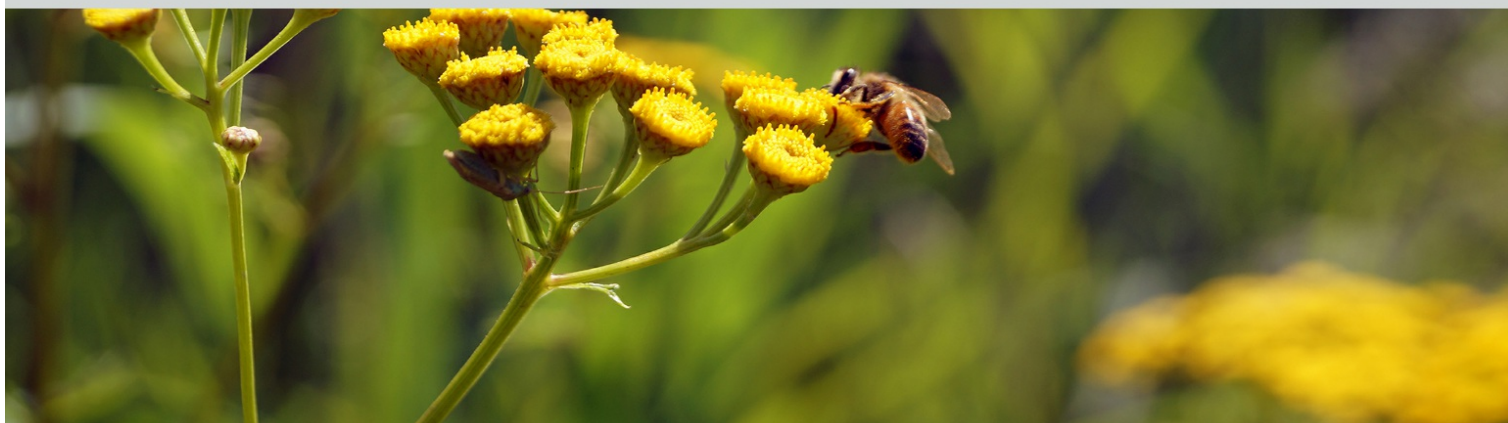

Intuitive navigation using the human body as a starting UI

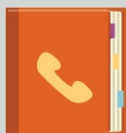

Evidence based scientific information where available on side-effects, interaction, allergic reactions

Continuously updated cross-validated database
